

1. A blocked isocyanate group-containing resin composition, comprising a resin (C) obtainable by modifying a resin (A) having, in one molecule, two or more blocked isocyanate groups represented by formula (I) or (II):

where  $R^1$ ,  $R^2$ ,  $R^3$ , and  $R^4$ , which are same or different, each represents a substituent having 1 to 10 carbon atoms,

with a monohydric alcohol (B), where either (B) is one or more compounds selected from the group consisting of mono (or oligo)propylene glycol monoalkyl ethers having 4 to 10 carbon atoms, and mono (or oligo)ethylene glycol monoalkyl ethers having 4 to 10 carbon atoms, or (B) is represented by formula (III):

where  $R^5$  represents a substituent having 5 to 18 carbon atoms, replacing at least one of the  $R^1$ ,  $R^2$ , and  $R^3$  with the  $R^5$ ;

wherein the resin (C) has a lowered solubility parameter as compared with the resin.

14. The thermosetting composition according to claim 12, wherein the using weight:weight ratio of the resin (C) to the polyol (D) is from 1:0.5 to 1:20 based on both components.
